

SHUBHAM DESHMUKH

Frontend Developer | Angular | TypeScript

Pune, India | +91 7218438401 | shubhamdeshm37@gmail.com | LinkedIn | GitHub

EXPERIENCE

Software Engineer — Rabbit and Tortoise Technology Solutions

Jul 2024 – Present

Clients: Amdocs and Schaeffler | Pune / Bengaluru

- Develop and maintain enterprise-grade Angular applications using TypeScript, RxJS, Signals, SCSS and REST APIs across AI workflow and automotive engineering platforms serving multiple client teams.
- Design and build reusable UI components, interactive dashboards, and AG Grid-powered data screens, along with robust validation flows and API integrations that include clear loading, empty, and error states.
- Implement real-time execution updates using SignalR, contribute to a VS Code extension for automated Gradle error analysis, and partner with backend engineers to deliver production-ready features within Agile sprints.

TECHNICAL SKILLS

Frontend: Angular 19, TypeScript, JavaScript, HTML5, SCSS, CSS3

Angular: Signals, RxJS, Standalone Components, Routing, Forms, Services, Dependency Injection

UI/UX: AG Grid, Angular Material, responsive and reusable component design

Integration: REST APIs, SignalR, frontend-backend API integration

Extension Dev: VS Code Extension API, Chokidar, Webviews, Commands

Tools: Git, GitHub, Postman, Chrome DevTools, Agile/Scrum

EDUCATION

Master of Computer Applications (MCA)

2022 – 2024

DYPIMCAM, Pune | CGPA: 8.33 / 10

Bachelor of Science, Computer Science (B.Sc.)

2019 – 2022

Sangamner College | CGPA: 9.22 / 10

HIGHLIGHTS

- 2+ years of frontend development experience building and shipping enterprise Angular applications for global clients.
- Hands-on exposure to AI agent workflows, real-time monitoring systems, automotive Model-Based Design (MBD), and developer tooling.

PROJECTS

1. Studioforce (Amdocs Client)

- Developed frontend features for an AI-powered workflow platform using Angular, enabling users to build and execute agent-based workflows through an interactive drag-and-drop canvas.
- Implemented node connections, drag-and-drop, panning, and agent skill configuration, integrating frontend workflows with backend services through REST APIs.
- Built dashboards for agents, blueprints, predictions, and generated workflows, including execution controls, live status monitoring, and real-time updates via SignalR.

Tech: Angular, TypeScript, SignalR, SCSS, REST APIs, HTML, CSS, Git

2. AI-Assisted SW (Schaeffler)

- Developed the Angular web UI and VS Code extension features for an AI-assisted Gradle error analysis and resolution platform.
- Designed project-wise error dashboards, individual project dashboards, and admin-level configuration dashboards for monitoring errors and managing project settings.
- Integrated REST APIs to send build-error and changed-file context to backend services and display AI-assisted solution recommendations.
- Built user-friendly screens for error details, Gradle task information, and tracked file changes, including filtering, pagination, loading states, and error handling.

Tech: Angular 19, TypeScript, SCSS, REST APIs, VS Code Extension API, Chokidar

3. MBD – Model-Based Design (Schaeffler)

- Developed Angular modules for a requirement-to-Simulink-model generation platform supporting an automotive embedded software pipeline.
- Built Excel and Polarion import workflows and rendered large requirement datasets using AG Grid with pagination and filtering.
- Implemented Level 3–4 requirement selection and agent dispatch through RIA, LLRGA, and FLA for requirement and Simulink code generation, managing state with Angular Signals and reusable Angular Material components.

Tech: Angular 19, TypeScript, SCSS, AG Grid, Angular Material, REST APIs, Signals
